ShipShop : An Online Retail Store

Project Report (3rd Deadline)
Kartik Gupta (2021056) | Harsh Kumar Pal (2021047)

An SQL file for our project has been attached, which contains the following tables: Admin, Customer, Category, Product, Orders, Cart, Order_items, cart_items and Shipping Agent.

While making the tables following integrity constraints have been kept in mind:

1. Primary Key
2. Foreign Key
3. NOT NULL
4. CHECK
5. UNIQUE
6. ON DELETE CASCADE

Data population was achieved via an online bulk data generator i.e. https://www.mockaroo.com/.

The data was carefully generated in accordance with the integrity constraints.

The attached SQL file, ShipShop.sql contains a complete structure and data dump of the created database.
